

OWN THE EDGE: VISIBILITY WHERE THE GRID
MEETS YOUR MOST CRITICAL CUSTOMERS

Primary Meter Monitoring

FIND ROOT CAUSE

Pinpoint whether issues originate on the utility or customer side, with clear data to support every decision.

CUT TRUCK ROLLS

Replace costly on-site visits with remote diagnostics and digital inspection from primary metering cabinets.

RESPOND FASTER

Deliver real-time power quality alerts to engineering, customer service, and C&I account teams simultaneously.

Real-Time Intelligence at the Source

Installs on any pad mount, aerial, and vault configuration with no impact to revenue-grade metering

Measure primary current via Rogowski coils installed on upstream utility-side conductors

Detect voltage sags, swells, harmonics, transients, and waveform disturbances in real time

Identify fault directionality and distance-to-fault to accelerate root-cause analysis

Enable remote digital inspection and diagnostics, eliminating unnecessary truck rolls
