

Intelligent Safety Solution

**Protect and preserve  
trust at scale**

**ubicquia**® smarter infrastructure for all.™

## Communities Need Cameras

Protect people and the places they go – without adding friction or fear.

Traditional camera deployments can be expensive, slow, highly visible, and difficult to scale. When law enforcement needs to deliver greater visibility and faster response without increasing surveillance concerns or straining limited budgets – there’s a better path to camera deployment.

## Streetlights Offer a Smarter, Faster Approach

Strengthen security, without changing how your city feels and functions.

### Savings

Reduce time and cost to deploy with no new poles, NEMA enclosures, or power trenching. Simple to install and relocate as needs evolve.

### Performance

Expand coverage and preserve the urban environment with a design that blends discreetly into the cityscape.

### Reliability

Reinforce trust, credibility, and confidence in every deployment with a solution built for mission-critical environments.

### Safety

When safety matters, speed matters. Video at scale detects hazards, prevents crime and can be used as evidence – supporting safety for pedestrians, vehicles, officers, and the entire community.

# Deploy Faster, Scale for Less, Protect Communities

A proven path to public safety that uses existing infrastructure and trusted partnerships.

## Simple, Streetlight-Mounted Camera Deployments

UbiHub® devices enable streetlights to support public safety technologies with installation in as little as 15 seconds — delivering reliable power, processing, and backhaul.

## Control-Ready Photocell Capabilities

Dusk-to-dawn lighting is automatic. Full intelligent controls including 24/7 monitoring, real-time alerts, and remote diagnostics can be activated at any time.

## Attachment Agreements

Simplify access to utility-owned poles, removing one of the biggest barriers to camera deployment. Scale coverage quickly without navigating lengthy negotiations.

## Seamless Integrations

Compatible with leading cameras and VMS platforms for centralized asset management. Support for a wide range of PoE sensors including LPR, situational awareness, audio, and environmental.

## WHY UBICQUIA

**Join the global shift to intelligent infrastructure.**

Ubicquia delivers AI-powered solutions that transform critical infrastructure into intelligent systems. Operating on existing streetlight and grid infrastructure, the platform collects billions of data points at the edge and distills them into actionable insights that power efficiency and resiliency for critical infrastructure customers and the communities they serve.

Ubicquia is trusted by some of the largest utilities, cities, enterprises, and law enforcement agencies in the country to drive measurable savings, enhanced performance, unparalleled reliability, and safety at scale.
