

Intelligent Streetlight Solution

Unlock insights that
power efficiency

Efficiency Starts with Visibility

You can't fix what you can't see.

Cities are under constant pressure to keep their streets bright and safe. Outages impact community trust and the sense of security every city strives to protect. When traditional lights go out, it often requires multiple trips to the same pole to confirm ownership, diagnose the problem, and resolve it. There's a better way.

Simplify & Streamline Asset Management

Take a proactive approach to lighting management – it pays for itself.

Savings

Cut energy costs, extend fixture life, and complete maintenance or repairs with one-and-done truck rolls.

Performance

Pinpoint the source of common lighting issues like flickering lights or day burners and resolve them before anyone notices.

Reliability

Ensure consistent light output throughout fixture life and monitor power quality for consistency across your network.

Safety

Optimize lighting levels for pedestrian and vehicle visibility, even in Dark Sky communities.

Data That Simplifies Streetlight Management

360° visibility. AI-powered insights. Monitored 24/7.

Intelligent Lighting Control

Gain access to power and dimming schedules that conserve energy and ensure consistent light output over the life of a fixture. Receive real-time alerts on day burners, failures, and other lighting issues and perform remote diagnostics to pinpoint the source. Access robust analytics across your network of cobrahead and decorative fixtures.

Public Safety Cameras

Simplify the deployment of LPR and other public safety technology with a streetlight mount. Power is reliable, there is no pole or enclosure construction necessary, and installation takes just minutes.

Fully-Managed Service and Deployment

24/7 support, work order creation, third-party integrations, and end-to-end service including auditing, installation, and maintenance.

WHY UBICQUIA?

We're leading the global shift to intelligent infrastructure.

Ubicquia delivers AI-powered solutions that transform critical infrastructure into intelligent systems. Operating on existing streetlight and grid infrastructure, the platform collects billions of data points at the edge and distills them into actionable insights that power efficiency and resiliency for critical infrastructure customers and the communities they serve.

Ubicquia is trusted by some of the largest utilities, cities, enterprises, and law enforcement agencies in the country to drive measurable savings, enhanced performance, unparalleled reliability, and safety at scale.
