

PROTECT YOUR SUBSTATION INFRASTRUCTURE

# Always-on Grid Intelligence

## STRENGTHEN SITE SECURITY

Keep unauthorized access, perimeter breaches, and yard events from escalating.

## REDUCE OUTAGES

Catch equipment issues weeks before they become service interruptions.

## DEPLOY IN MINUTES

No new poles, no power trenching. Cameras are up and running the same day.

## Intelligence for Every Substation 24/7/365

### Plug into existing substation lighting infrastructure

Monitor arc events, transformer degradation, and thermal anomalies weeks before failure

Detect objects in the substation yard, including animals, vegetation, and foreign materials, before they trigger outages

Remotely verify events with real-time visual intelligence, reducing unnecessary truck rolls

Automate security alerts for perimeter breaches, gunshot detection, and equipment tampering

Extend transformer and switchgear life with predictive maintenance insights that flow directly into your OMS, asset management, and work order systems.
